NON-HAZARDOUS AIR DISINFECTION FOR HEALTHCARE FACILITIES

PRESENTED BY

LIZ NYOKABI

JANST HEALTHCARE INTERNATIONAL LTD

Janst Healthcare International Ltd

- We have been in business for more than 21 years.

- We offer high level and cost effective disinfectants and continuous training, education combined with 24/7 customer service to ensure optimal use of our products.

- We understand that protection of HCWs and patients using health care facilities is of equal importance to the accuracy of data. Therefore applying effective infection prevention control procedures is vital. HCW working with a vulnerable population need to have confidence in infection prevention and control measures put in place to ensure best practice can be delivered.

Janst Healthcare International Ltd

- With hydroliq, we can be trusted by healthcare professionals around the country to achieve their goals in public health, HCWs protection and patient safety.

- Hydroliq air disinfectants is the appropriate solution for air disinfection, sterilisation of equipment, room disinfection &hand sanitization. This makes it easy to achieve health and safety compliance in healthcare sectors.

OUR FLAGSHIP PRODUCTS

INTERSURGICAL®
COMPLETE RESPIRATORY SYSTEMS

medela
THE SCIENCE OF CARE™

HYDROLIQ
PURE WATER SOLUTIONS

We are the main distributors for

Intersurgical Products

- The leading supplier of respiratory care disposables, including high quality validated infection control products for ICU, theatre and other departments in hospitals.

Medela Products

- Swiss-made quality breast pumps (both manual and electric and its accessories)

Complete respiratory care

Airway Management

A range of airway management devices from the y-piece connection of the breathing system to the patient's airway.

- Airway Devices
- Airway Accessories
- Patient Connections
- Breathing Filters, HMEs and HMEFs

Anaesthesia

A range of anaesthesia breathing systems, anaesthetic face masks, and accessories for use in the operating room, recovery and emergency care.

- Anaesthetic Face Masks
- Anaesthetic Breathing Systems
- Breathing System Accessories
- CO_2 Absorbents
- Resuscitation and Emergency Care

Critical Care

A range of respiratory products for ventilatory support in Intensive Care and High Dependency Units for adult, paediatric and neonatal patients.

- Patient InterFaces
- Critical Care Breathing Systems
- Humidification Chambers
- Accessories
- Closed Suction Systems
- Oral Care
- Connectors and elbows

Oxygen & Aerosol Therapy

A range of products for fixed and variable concentration oxygen therapy, aerosol and nebulisation therapy.

- Oxygen Therapy
- Aerosol Therapy
- Nebuliser Therapy
- Respiratory Physiotherapy

HYDROLIQ
PURE WATER SOLUTIONS

THE SUSTAINABLE WAY TO **FIGHT VIRUSES**, **BACTERIA** AND OTHER **GERMS**

SWISS MADE

What it is

Hydroliq is applying a technique that has gone into the literature as **chlorine alkali electrolysis**.

This was developed by the Russian government during cold war.

Hydroliq has further developed this technology and produces water-sodium chloride compounds that are **highly stable** and **harmless to humans and the environment**.

Our electrochemical manufacturing process produces a pH-neutral **disinfectant solution with a very high redox voltage**.

The redox voltage (reduction / oxidation) is a measure of the **germicidal** and **oxidative effects** of disinfectants.

The redox voltage of all **Hydroliq** solutions is higher than 750 millivolts (mV).
→ At this level, **water is very disinfectant and eliminates bacteria, viruses, fungi, spores and bacterial odors** within a very short time.

SWISS MADE

HYDROLIQ
PURE WATER SOLUTIONS

JANST
HEALTHCARE

What it is.....

- **Hydroliq Pure Water disinfectant, a Swiss Biotechnology product** that has the ability to eliminate viruses, multi-resistant bacteria, spores and fungi within a very short time.
- It is in liquid form but when put in a machine it turns into a mist.
- It goes into a hidden places/angles
- It works **without alcohol, without synthetic additives** and can be used in presence of **human**s without any **health risks**
- It is dispersed with nebulizers /humidifiers and eliminates pathogens in the air and can also be used as a hand sanitizer or surface disinfectant

What it is…

- With **hydroliq pure water disinfectant,** we guarantee you over 1 year efficacy once you open the bottle as it doesn't lose strength on opening, hence you don't have to replace it every few months.
- It's effectiveness is instant; once you apply, you don't have to wait for two minutes before wiping.
- It doesn't wet surfaces
- It is paediatric friendly
- Safe to use on food contact surfaces

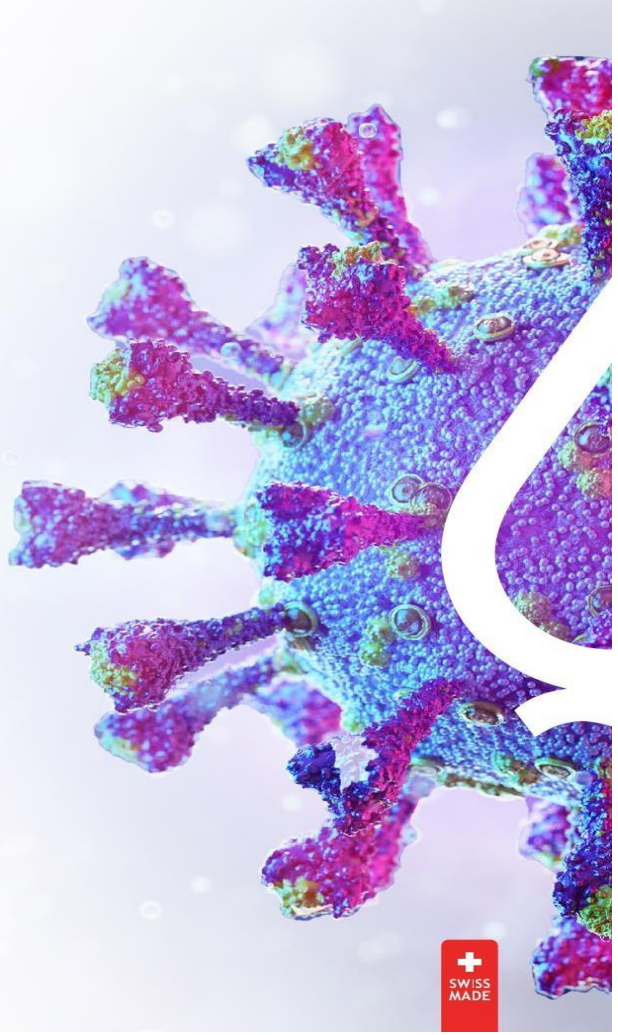
Challenges of our time

Confrontation with **multi-resistant bacteria**, influenza **viruses** and **Covid-19 mutations**.

Almost every aspect of our daily (private and professional) life is affected.

Permanent disinfection is the basis for proper health prevention.

It’s the only way to ensure our safety!



Challenges of our time

- Other bleach solutions should be left for at least 2 minutes before being wiped for it to be effective as for hydroliq the effectiveness is instant.

- You can’t mix the bleach (disinfectant) with ammonia (cleaner) the mixture produces poisonous gas.

- Other traditional disinfectants poses risk to pediatric environmental health and are not safe for use on food contact surfaces.

- When using some air and surface disinfectants, you have to ventilate the room by opening windows to bring in outside air, turn on the fan etc.

Highlighted problems in conventional infection control solutions

- Safety –Can’t be applied in the presence of people, toxic residues
- Affect mucous membranes and skin
- Application – requires PPEs
- Effect on people & environment
- Corrosion- metals, rubber and plastic materials
- Storage – Loss of strength over time
- Dangerous goods – strict regulations in handling and transportation
- Financial Impact

Unique Hygiene Technology

In contrast to conventional room or surface disinfectants, **Hydroliq Pure Water Solutions** are completely **harmless to people and the environment**, since **no toxic residues are created**.

The treated surfaces and rooms can be used by people immediately after or even during disinfection.

Skin, mucous membranes and surfaces are not attacked.

SAFE
NON-TOXIC
EFFICIENT

Below are two very short video extracts, in order to give you an idea on how the liquid solutions are dispersed. One is about the complete disinfection of vehicle interiors, including odor elimination (done by our customer). The second one is illustrating how funiculars in tourist areas are using it (of course this can be used in a similar manner for many other areas of application):

CUSTOMER REVIEW

HYDROLIQ
PURE WATER SOLUTIONS

FLUGHAFENZÜRICH

What we like the most:
- No stains/residue left behind
- safe for staff and guest
- No floor or material damage
- cost effective

Customer details
Zurich Airport (IATA-Code: ZRH) is the largest airport in Switzerland. It is operated by the stockexchange listed Flughafen Zürich AG, voted by World Travel Awards as «Europe's leading airport» 16 years consecutively

Background

We had various problems at the airport. The alcohol-based hand sanitizer stained and damaged our floors. Daily sanitization was not always manageable. Passenger buses should be disinfected after every journey, but there was never enough time, nor staff.

Due to the Corona virus, many flights were cancelled and a number of areas were locked off to the public. We however still had to sanitize all high-traffic areas at regular intervals, for the safety of our staff and guests.

Reference image

Our aim

The goal was to find a disinfectant that caused no (or less) damage to materials.

At first we were cautious about the efficacy of a water-based sanitizer.

But following our own laboratory testing at the airport, we are completely convinced that Hydroliq is a powerful product.

Our Application

We use three different Hydroliq products to sanitize all surfaces, high-traffic areas and entire terminals. We applied spray on surfaces, nebulization applications in open areas and hand sanitization dispensers. We felt the nebulization application sanitized areas much faster and more thoroughly. We had no damage to floors or materials. Our staff no longer complained of having to inhale alcohol vapors (that often lead to headaches); and no more cracked or irritated skin. We were satisfied that the Hydroliq product was a much safer option! And we will continue to use Hydroliq even after the Corona virus pandemic to protect our staff and guest.

Product application

We use:

- Hydroliq Air
to disinfect areas through nebulization with a mobile nebulizer

- Hydroliq Professional
to disinfect all surfaces

- Hydroliq Desinfecta
to disinfect the hands by our hand disinfectant dispensers

CUSTOMER REVIEW

HYDROLIQ
PURE WATER SOLUTIONS

What we like the most:

- A safe and sanitized taxi for the driver and the customer
- No surface damage in the taxi
- Cost- and time savings
- We are the ONLY Taxi Company offering perfectly sanitized vehicles

TAXI 044 444 44 44 hin und weg

Customer details

Taxi 444 is a traditional Zurich based company with around 230 drivers. The "Care Together" project was launched to enable safe trips to and from the Corona test centers.

Background

Corona testing is important to stop the virus from spreading. With the "Care Together" project, we accompany customers quickly and safely to the next Corona Test Center and back home. In keeping the risk of infection as low as possible in our taxis, we were looking for a sanitization partner who, in addition to the other measures (mask requirement, plexiglass separating panes and contact tracing), could also give us the necessary protection of a perfectly disinfected vehicle. Hydroliq gave us a practical and time-efficient solution with their thorough disinfection. We are having peace of mind knowing the risk of infection is significally reduced.

Reference picture

Our aim

The aim was to offer thoroughly disinfected taxis to our customers and drivers, for them to feel safe and protected when making trips to and from the Corona Test Centers.
In an effort to give back to our community, we offered these trips at discounted rates.
The Hydroliq disinfection process was so cost-effective and quick, that it made the project even possible.

Our application

We provided thoroughly disinfected vehicles for the "Care Together" project. After every second journey to the testing centers, vehicles are decontaminated.

The cold fogging Hydroliq device is attached to the car window and within a few minutes the "Hydroliq Car" product can be distributed and thoroughly decontaminate the vehicle. It is getting around the plexiglass panels and is even killing viruses in the air conditioning system.

There are special set-up stations where drivers can take their cars at regular intervals, and as a result reduce the risk of infection for themselves and their customers.

Product application

We used:
Hydroliq Car 500ml
for spraying in the car

Hydroliq Car Device
to distribute the Hydroliq Car product

Hydroliq Professional Ready-To-Use
to disinfect surfaces, door handles etc.

"Overview of NTDs Sector in Kenya and MOH Response"

Mr. Wyckliff Omondi
Program Manager
Division of Vector Borne Diseases and NTDs

Ministry of Health Kenya (MOH)

Kenya Healthcare Federation

KEPSA
KENYA PRIVATE SECTOR ALLIANCE
The Voice of Private Sector in Kenya

Overview of Neglected Tropical Diseases Program in Kenya

Wyckliff Omondi

Head DVB&NTD-MoH

Introduction

20 diseases are listed by WHO under the umbrella of neglected tropical diseases (NTDs)

NTDs majorly affect the less privileged individuals in the society

The diseases disfigure, disable with impact of morbidity resulting into less productivity/perpetuate poverty

Strategies exist for control, elimination and eradication

NTDs no longer of public health problem

Kenya has been certified free of one NTD, guinea worm

Additionally, four other NTDs are no longer of public health importance namely;

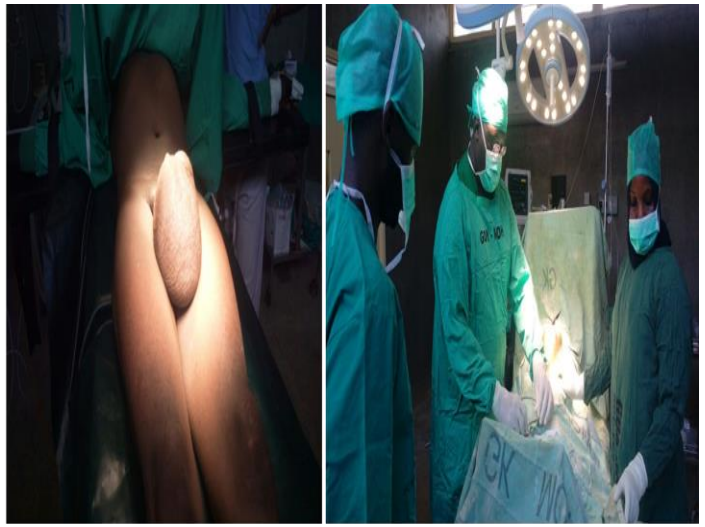
1. Human African Trypanosomiasis (Sleeping sickness)
2. Onchocerciasis (River blindness)
3. Rabies
4. Leprosy

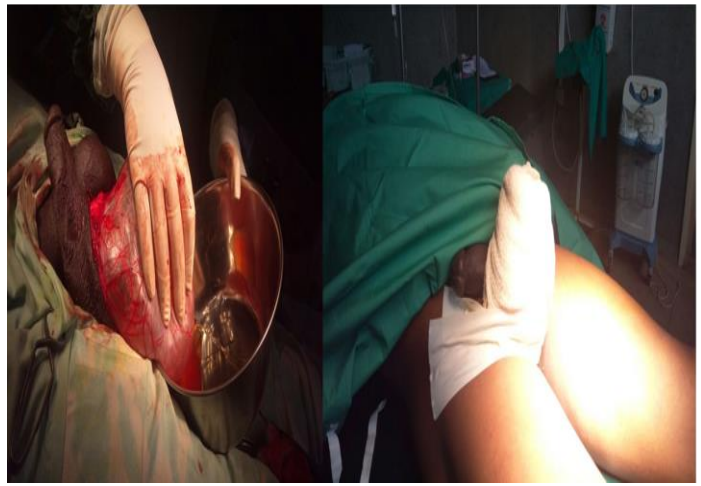
NTDs no longer a public health problem

Soil transmitted Helminths and Schistosomiasis

- Intestinal worm occur in more than 27 counties
- Impacts over 20 million Kenyans
- Upscale in mapping and mass treatment ongoing
- Schistosomiasis occur in lake region, Western Coastal, Central, Eastern North Eastern and pockets of Rift Valley regions
- Over 10 million remain at risk

Lymphatic Filariasis(Elephantiasis)





Distribution restricted to coastal region

Over 4 million at risk of this mosquito borne NTD

Kenya towards elimination stopping mass treatment campaign by 2021

Over 4,000 backlog of hydrocele and lymphedema cases exist

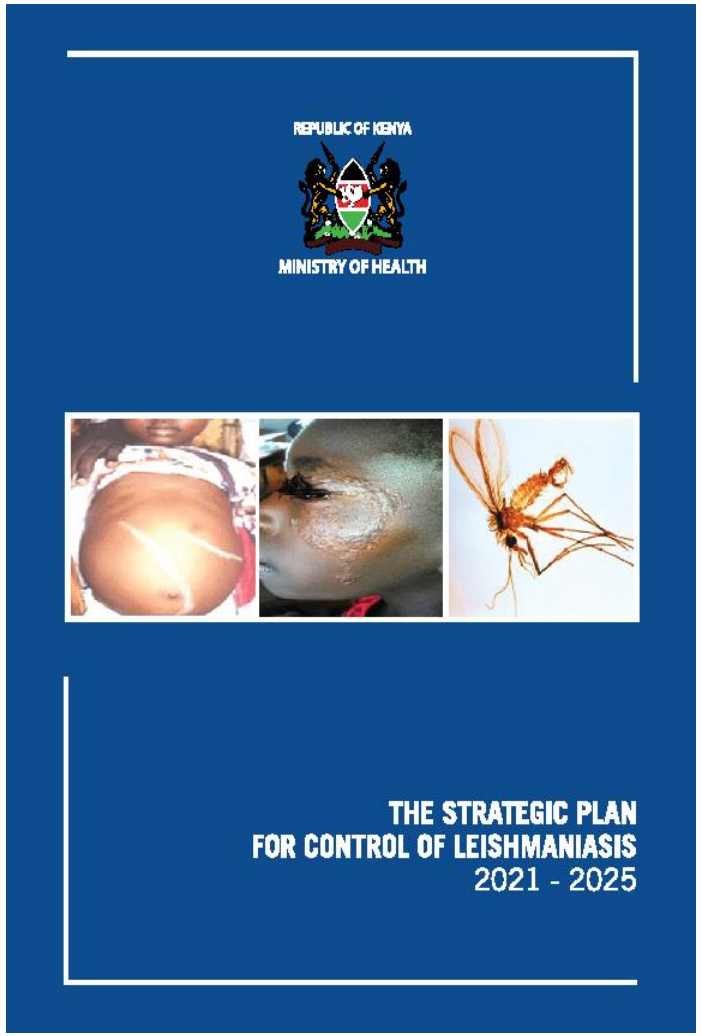
Blinding Trachoma

Endemic in 12 arid and semi arid counties

Treatment stopped in 5 counties

Improved WASH and BCC required to sustain treatment gains

Leishmaniasis (Kalaazar)



Endemic in more than 9 counties located in arid and semi arid areas

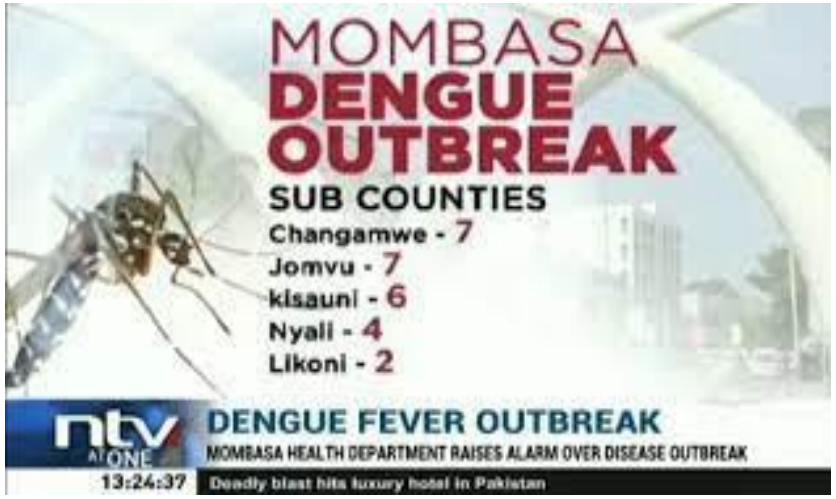
Both visceral and cutaneous forms endemic in the country

If not treated leads to death

Upsurge reported in most endemic areas

New foci observed in the recent past

Dengue and Chikungunya



Mosquitoes borne viral infections

Circulating antibodies reported in 8 regions of the country

Recent outbreaks in Coastal region, and North Eastern region

No vaccine or medicine to manage the two diseases

Snakebite envenoming

Snakebite occurs widely and randomly in most parts of the country

Parts of Coast, Rift Valley, Eastern remain majorly affected

Kenya developed guideline to manage snakebite envenoming

Capacity building to high risk counties conducted

Collaboration with K-SRIC and Republic of Costa Rica to develop antivenom from the country.

Other NTDs reported in the country

Scabies and other ectoparasites

Cystic Echinococcosis

Taeniasis/Cysticercosis

Food borne Trematodiases

Unknown distribution and occurrences

Mycetoma

Yaws

Buruli Ulcers

Government Efforts to End NTDs

Ministry of Health through Division of Vector Borne & Neglected Tropical Diseases (DVB&NTD)

Focus on prevention, control and elimination of NTDs of public health importance

Key policy documents

- Second national strategic plan for NTDs control and elimination 2016-2020
- Breaking Transmission Strategy 2019-2023.

Requirements to NTDs control

Adequate human resource towards NTDs control

Mapping to refine NTD burden in the country

Support interventions in qualified areas (advocacy, health education)

Strengthen health system to tackle NTD and report outcome of the interventions

Influence investments in water, sanitation, and hygiene infrastructure in NTD endemic areas

Intestinal Worms
1.7B People Require Treatment

Lymphatic Filariasis
892M People Require Treatment

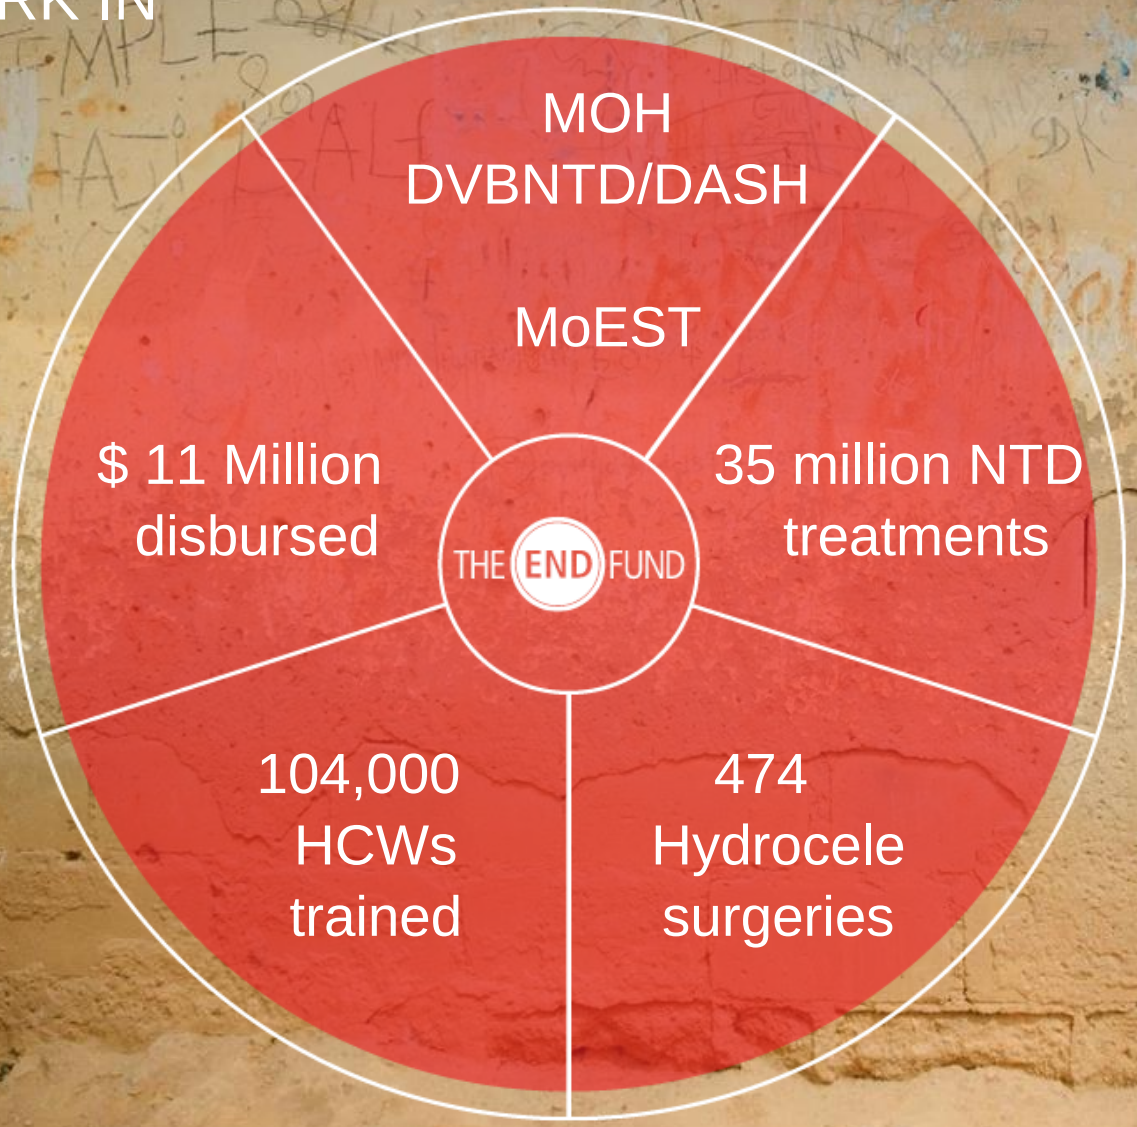
River Blindness
217M People Require Treatment

Schistosomiasis
229M People Require Treatment

Trachoma
177M People Require Treatment

Why Neglected Tropical Diseases?

OUR WORK IN KENYA



WHAT ARE THE IMMEDIATE IMPACTS OF THE UK FUNDING CUTS?

FUNDING LOSS

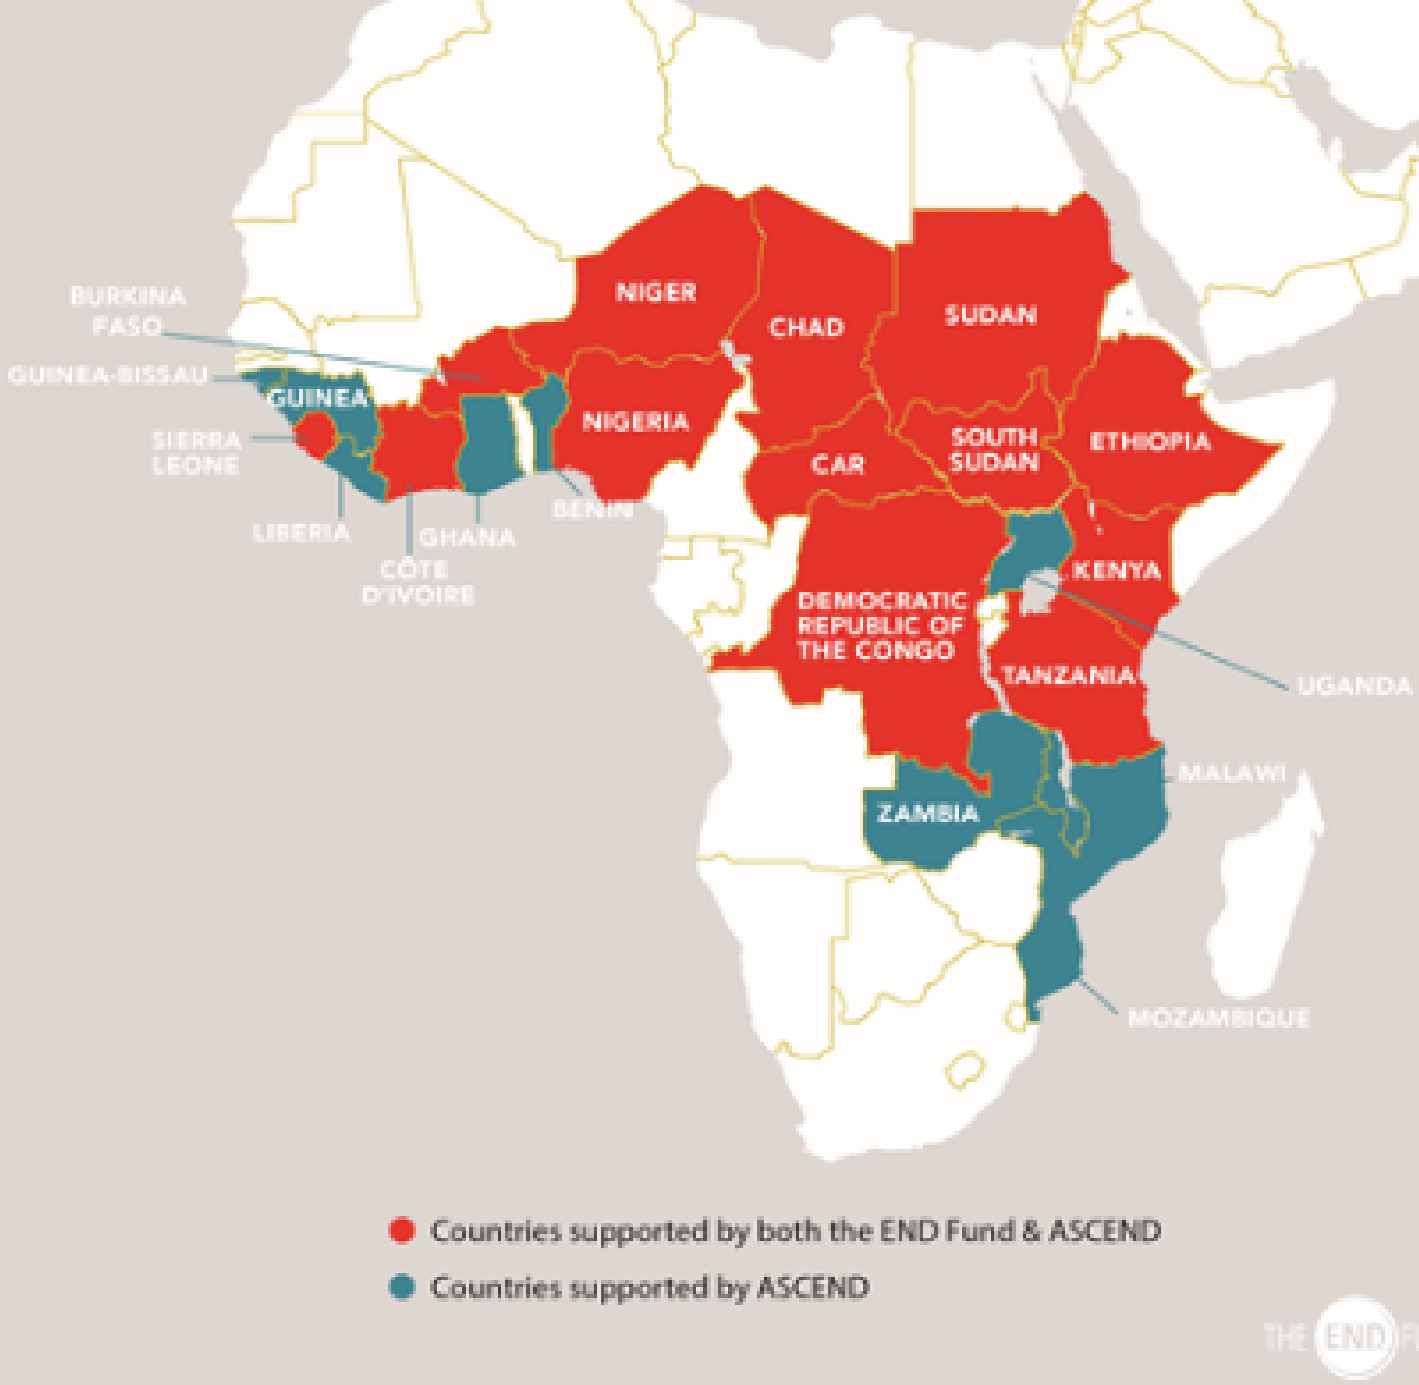
£150 million - committed funding to NTDs (April 2021 to March 2022)

THE PEOPLE IMPACT OF CUTS

- **250 Million** — Treatments in jeopardy
- **180,000 —** disability-preventing surgeries stopped
- **Hundreds of Millions** — Donated drugs wasted

COUNTRIES MOST IMPACTED

- **Ethiopia** – 14 Million people will not receive treatment for trachoma.
- **DRC** – 30 Million people will not receive treatment for river blindness.
- **Nigeria** – 80 M people will not receive treatment for Lymphatic Filariasis .
- **South Sudan** - 10 million people will not receive treatment for lymphatic filariasis, schistosomiasis, onchocerciasis and trachoma.



WHERE DID WE START?

Intestinal worms

Onchocerciasis (River blindness)

Lymphatic filariasis

Buruli ulcer

...with a clear focus on short- and long-term actions

Multi-Sectoral Cooperation

African NTD Leadership Initiative (ANLI)

Place-Based Approach

THE END FUND

Why should you invest in NTDs?

Great value for money

$.50 cents (KES 50) to deworm a child.

$ 100 (KES 10,000) for a trachoma surgery

Children who are dewormed are 25% more likely to attend school

Integration : education WASH, veterinary health

Why should you invest in NTDs?

Economic benefits

$27-$42 worth of economic benefit is produced for every dollar invested in NTD control & elimination.

Potential to increase an adult's earnings by 20%

Elimination potential in our lifetime!

THE END FUND

TOGETHER
we can
END NTDS!

KHF Members Meeting 21st October 2021

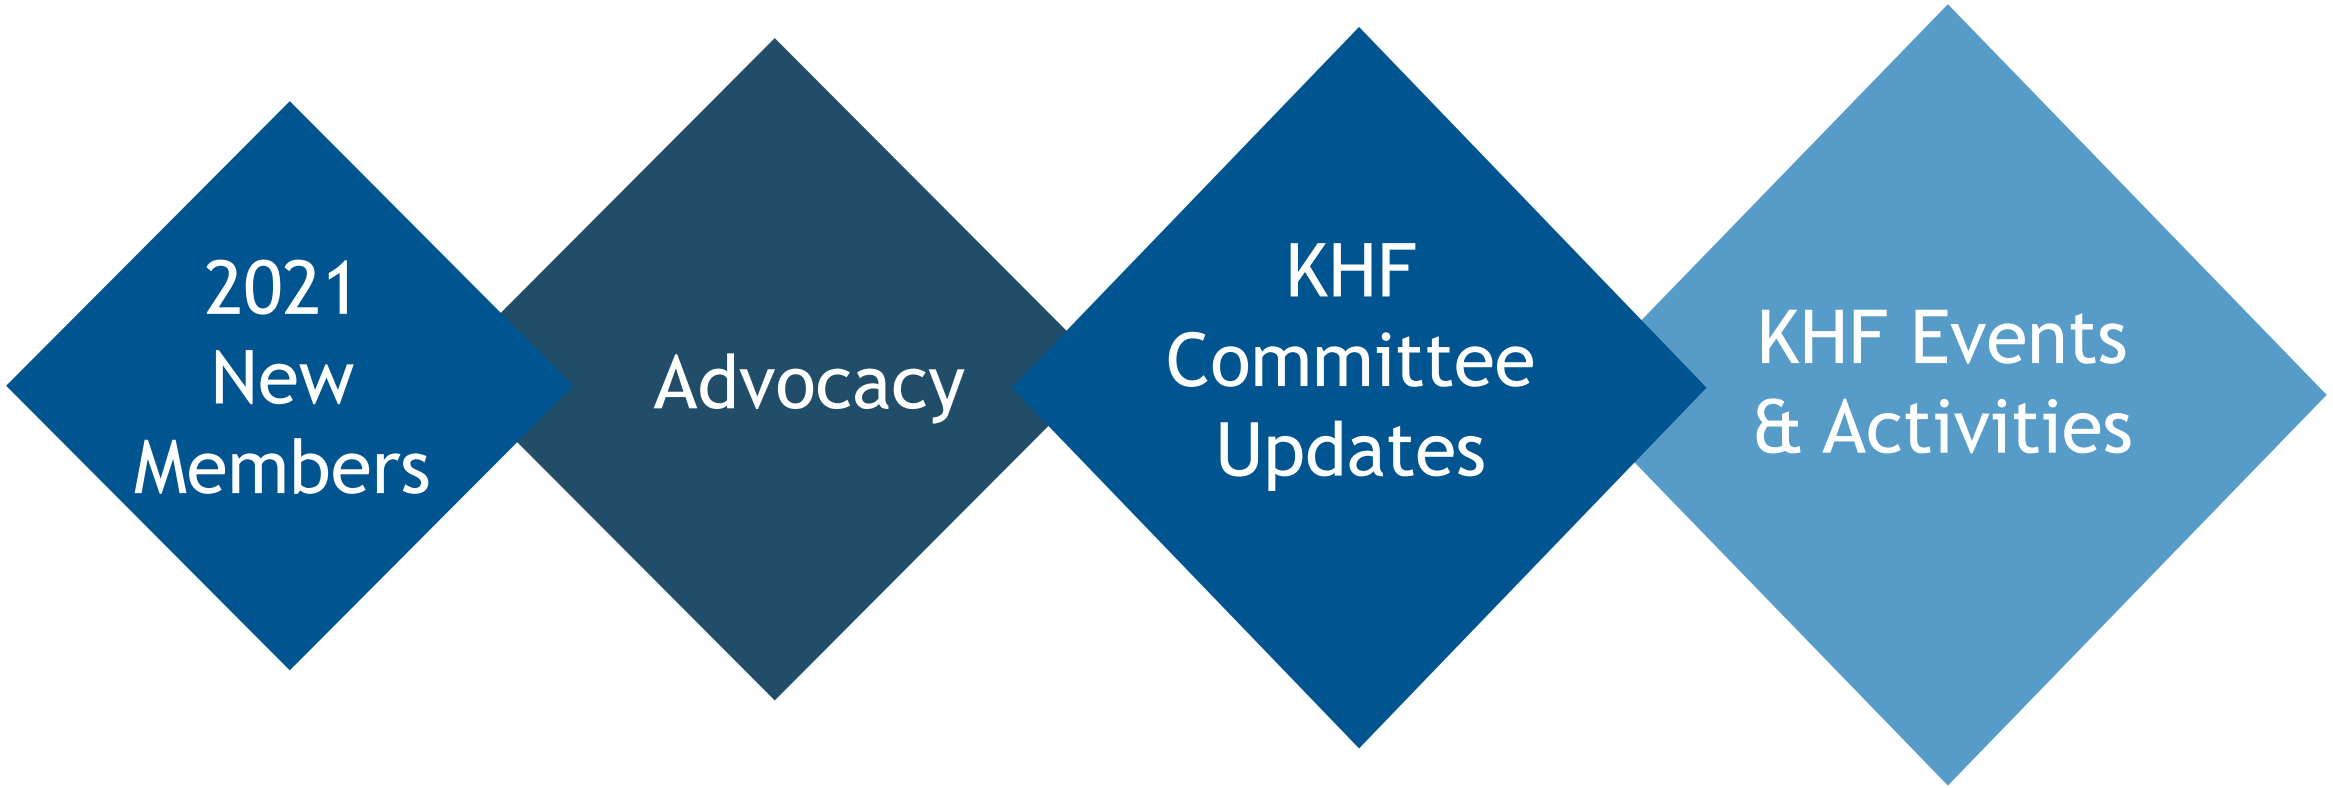
Today's Agenda



Kenya Healthcare Federation

KEPSA
KENYA PRIVATE SECTOR ALLIANCE
The Voice of Private Sector in Kenya

Public Private Partnerships (PPP)

	Issue	Proposed Intervention	Impact
1	**Private Sector Involvement** in the **Health Products and Technologies (HPTs)** document, Supply Chain Strategy 2020 - 2025.	Private sector can plug in through **technology and data quality** – to be able to track HPTs from planning to data usage.	Inclusivity of all Strategic Stakeholders in the HPT document development, thus no objections and reactions to a finalized document.
2	**COVID-19 Vaccine Deployment**	i. Private Sector to support the Ministry **on communication and distribution strategy.** ii. Diverse systems that can be used to aggregate data iii. Recruitment or enlisting of more Private Sector Facilities and CHWs	i. Vaccine Apathy i. Management of data during rollout process. ii. Vaccine Distribution
3	KHF representation in the Ministry of Health **Technical Working Groups.**	Meeting with the relevant person to align and ensure Private Sector representation in all TWGs.	Private Sector Inclusivity and participation in various policy formulation meetings, thus no objections and reactions to finalized documents.
4	**Wheels for Life Project**	Endorse and Implement the Project under NHIF Framework. Mobilize Strategic Partners or funding.	i. Reduced Maternal Mortality. ii. Quality, Accessible and Affordable maternal care.
5	**Town Hall with KHF Professional Associations**		**Discuss value proposition of KHF to Professional Associations**

Healthcare Financing (HCF)

	Issue	Proposed Intervention	Impact
1	**Health Facilities Reclassification** and the Joint Health Inspection Checklist KEPH Level Requirements	i. The **Medical Practitioners and Dentist (Private Medical Institutions) (Amendment) Rules, 2017** be enacted to solve the issues by private healthcare providers ii. Lobby with NHIF on the Joint Health Inspection Checklist Requirements	i. Access to affordable healthcare services ii. Help curb fraudulent/corruption activities at facilities iii. Ease of doing business
2	**NHIF (Amendment)Bill 2021**	Consider private sector submission	Improve cost and quality of care
3	Other NHIF Issues • NHIF Reforms, NHIF Pending Bills, NHIF Covid Medical Cover, Delayed accreditation	Consider Private Sector Submission	Improve cost and quality of care
4 5	**UHC Enrollment** • Counties have identified **indigents** that will be covered under UHC scheme. • Benefits package to include covering Emergency transportation.	Have the Private Providers and FBOs Contracted to offer care	• Increase access of care. • The Gov to pay for 5.1 m poor Kenyans to access cover.
	Payer- Provider Initiative	Improve cost and quality of care KHF and other partners are developing an	i. Better Payer Provider Engagement and HCF frameworks ii. Match the Quality verses the coast of care

Human Resources for Health(HRH)

	Issue	Proposed Intervention	Impact
1	Unregulated Health Care Providers- CHWs, EMTs, HRIOs	Engagement of all relevant stakeholders in the health ecosystem towards having a regulatory framework for the unregulated cadres.	Regulation will ensure mandatory training and practice standards. This will ensure progressive attainment of the highest standards of quality in provision of health services.
2	Health Labor Export initiatives and opportunities/ threats for private sector.	Private sector input in the Health Market Labor Analysis (HMLA) to inform sustainable Health Workforce Policies and Strategies in Kenya.	Evidence informed policies to ensure expatriation does not weaken the existing Health System.
3	Covid 19 Recovery Initiatives- Vaccination Rollout .	I. Increases HRH involvement (particularly Community Health Workforce) in community engagements to increase vaccine uptake. II. Maximize on Public-Private Partnerships in MOH vaccination Initiatives.	Increased Vaccine uptake to safe lives and livelihoods.

Health Regulations Quality and Standards (HR&QS)

	Issue	Proposed Intervention	Impact
1	Vaccine hesitancy with consumption of the second doses	i. Private Sector to support the Ministry **on communication and distribution strategy.** ii. Recruitment or enlisting of more Private Sector Facilities and CHWs	Increasing the number of people who are fully vaccinated would allow us to reach herd immunity status.
2	Public private collaboratives in quality improvement activities		Enhance quality standards and reduce the gaps that exist in the market
3	Amendments to the BMS bill	Consider the private sector position on the BMS bill	i. Ease of doing business ii. Improved quality and access of care

ICT and Mobile Health

	Issue	Proposed Intervention	Impact
1	**COVID 19 ICU Dashboard**	Endorsement and approval by the Ministry of Health of the system	i. Better ICU Bed Management ii. Easy access to ICU Beds iii. Reduce Mortality Rate
2	**Telemedicine**	i. Explore interest of Ministry of Health in Telemedicine for public facilities as part of the E-Health Bill. ii. Integrated Systems including EMR and facilitation of telemedicine video conferencing	i. Increase access to Healthcare ii. Improve quality of Healthcare
3	**Digital Service Tax**		
4	**E-Health Bill Update**		

Supply Chain

	Issue	Proposed Intervention	Impact
1	**HS CODE Classification of Tax on haemo-dialyser Products** Classification not done	• Classification to remain the same. • Creating a sub code under the main header. Tax on Certain Products to be waved.	
2	**Tax Issue on pharmaceutical raw/packaging materials.**	• Taxes has to be absorbed by pharma manufacturing unit, thus impacting as vat. • Need Intervention and way forward from KEMSA and Treasury	Reduced cost of Healthcare products
3	**Zero rating on Healthcare Products and Technologies (HPTs)** We have a waiver letter	• Awaiting gazetment • Need to follow up with the MOH and Treasury.	
4	**Medical Oxygen Capacity and Tax Issues.** There is no more oxygen shortage	Oxygen manufacturing Plants were allowed to come in tax free	
5	**Multiagency TWG - Taxation on Medical Devices**	Include KHF in the existing Multiagency TWG at MOH. Rein fenced the Healthcare Products

Today's Agenda

Kenya Healthcare Federation

KEPSA
KENYA PRIVATE SECTOR ALLIANCE
The Voice of Private Sector in Kenya

1 Multi-Stakeholder Partnership II

Projects

2 Wheels for Life Initiative

Highlights

- Launched **partnership between KHF, the Ministry of Health, and local ride hailing companies** to provide free transport for pregnancy-related emergencies

3 Africa Economic Research Consotrium (AERC)

Projects

Regional project across East Africa to **facilitate a regional coordinated response** to the COVID-19 crisis and support **the process of formulating regional and country specific recovery plans**

4 Allm Market Research Project

Projects

Allm created Join, a multifunctional platform that enables communication among medical professionals in a secure and mobile environment, using three critical and diagnostically important means of communication:

Join also works with Allm's triaging app called JoinTriage, which is used to guide paramedics by using the Stroke assessment scale questions to assist in diagnosis and to determine and recommend the best destination hospital.
